

up a bit as well to see the objects better.

I have sent these pictures to Timothy Good and Nick Pope. Both couldn't say what the objects were and Nick Pope suggested that I get in touch with you.

Please could you e-mail me and tell me if you have ever seen pictures of similar objects before or have you any idea what these objects could be?

Thank you for the help

**Section 40**

Hello,

In August of 2003 my 2 brothers, **Section 40** older brother and **Section 40** younger brother, and me had to look after my Uncles house while they were away on holiday for a week. They live in a small village called Culverthorpe a few miles outside of Sleaford. After a few days of looking after the house, one evening we were outside and the sky was perfectly clear and the sun had just gone down when we noticed 2 white objects over the fields coming towards us. One object was big and round while the other was smaller and almost completely round but seemed to have a sharp edge to it and this object was moving faster than the bigger one but they both were moving in the same direction over the fields in front of us. The objects didn't make any sound and moved too fast to be balloons and they basically moved across the sky until we couldn't see them anymore. We were really excited from seeing these objects, and because we still had a day left looking after my Uncles house we decided to borrow my Dads Digital Camera just in case we saw anything else. On the last night we were outside in the garden, the stars were out and it was nice and clear. My brothers were taking pictures with the camera and getting Orbs which just seemed to turn up in the pictures, we couldn't see them and my view about these Orbs is that most of them are just dust/moisture. When my brothers were taking pictures they were using the Flash on the camera. After a while of being outside we noticed something flashing, coming towards us, moving parallel/horizontal to the ground, over the trees at the bottom of my Uncles paddock which is at the bottom of his garden. As the object came closer we could see that it would flash a white light which covered the entire object, then the light on it would decrease until it would go out, then it would increase in brightness and then flash and continue increasing, flashing, decreasing in brightness and the light going out. This object wasn't making any sound and my brother **Section 40** had the camera took a picture of it. About the same time he took the picture we noticed another identical object coming from the same direction. As this second object was nearly above us we could see there was a smaller object, not perfectly round, which was travelling along with it. This smaller object wasn't flashing, it remained at the same brightness. **Section 40** more pictures of these 2 objects together but because the objects were moving so slowly **Section 40** actually taking pictures and checking how the pictures were turning out and seeing that they were blurry he was deleting any blurry ones and would try and get better pictures. After he got a clear picture, which is when the 2 objects were right above us, we watched them travel over the house and out of sight. Later on that night we went back outside after we had gone inside for a while and there was an intense fog and we couldn't see the stars anymore. I think because of the moisture in the air my brothers were getting the Orb pictures.

Attached to this e-mail are the pictures of the objects we saw. Number 63 is the first object we saw and was taken just as the light on the object had gone out but you can just about see the object in the top centre of the picture. Picture 64 was taken as the second object we saw was overhead and had flashed, you can see the white light around the object. Near the lower left of the picture is the smaller white object. Because of the settings on the digital camera at the time we saw the objects, the pictures appear quite dark so its best to use Auto balance when looking at them, I also brighten them
