

Hello,

I trust that both of you are the correct personnel to help with my enquiry. If not I would be grateful if you would forward this email to correct personnel.

Please find below a UFO eye witness statement that I have submitted to the UK UFO SIGHTING website. The first object detailed below was a helicopter, however, I would like you to see if you can provide any explanation or identify the second craft that was seen by myself on Saturday night [31st October 2009]. I assure you that this is not a hoax.

"Incidents occurred over Winchburgh, West Lothian between 7.30 to 8.30 pm - two incidents are described, one was definately a helicopter but the other craft could not be identified.

The two events happened within an hour - at about 7.30pm heard rapid approach of a helicopter - could have been Police chopper as I have seen this flying over area but usually during daytime. It finally came into view (standing in my back garden which faces west) and heard / saw obvious chopper but could not distinguish make. Engine sounded different to police chopper although it was flying much lower than normal. Saw navigation lights and curiously the whole underside of the helicopter cabin was illuminated in a white light (was not the searchlight - this was actual underside of craft that was illuminated). This passed over and flew away flying generally from west to east. Came inside, had dinner then after clearing up went outside again for some fresh air and glad I did.

An object, flying VERY low, came into view about three houses along to my right. I could not make out full body but using red lights it seemed to be cylindrical and as wide as an ordinary helicopter. This object came from south east flying in general direction of north west toward Blackness / River Forth. Three things I noted : (1) it was totally silent, (2) it had two large red navigation lights on body with one on top and other on bottom but placed

diagonally opposite each other i.e. bottom left and top right from angle I was viewing object, and (3) was moving VERY slowly, infact, almost drifting. Object in full view (at an angle) for only about 8 seconds. Regretted not driving to chase object as i had went upstairs to rear bedroom to see if i could gain a better view. By this time object had gone behind trees on the small west facing embankment but could still see the flashing red strobe lights - one strobe went then the other went off in a repeated set design (i.e. lights did not operate randomly). Object was then lost from view. Would like to state that it could not have been a plane as it would have stalled due to the very low speed (estimated 5 to 10 mph). Helicopter possible but why no noise - not aware that choppers can be silenced at such a low altitude, as object could only have been a couple of hundred feet off the ground..... if that (note it came in very low, just above double storey rooftop level). There was no noise, no vibration and no electro-magnetic interference as far as i could see (house lights stayed on, did not flicker etc).

Noted on other recent reports that drones (presume man made unmanned aircraft) were reported in skies above Edinburgh area and this is a possibility, but why fly them at such a low altitude and over populated areas ? There was no further sign of the chopper after this incident, but noted a commercial aircraft on final approach to Edinburgh Airport coming in from roughly the southwest may have had object in sight. Have emailed Edinburgh Airport and RAF Leuchars to see if they can shed any light on this incident."

With thanks,
